

How to use the COYODO Difference View

Difference View – Tips for use

Switch with a click between Difference View, Document 2 and Document 1

The PDF layers lie on top of each other. To display "Document 2 (new)", its layer must be visible () and the Difference View layer above must be hidden ():

To display "Document 1 (old)", both layers above must be hidden:

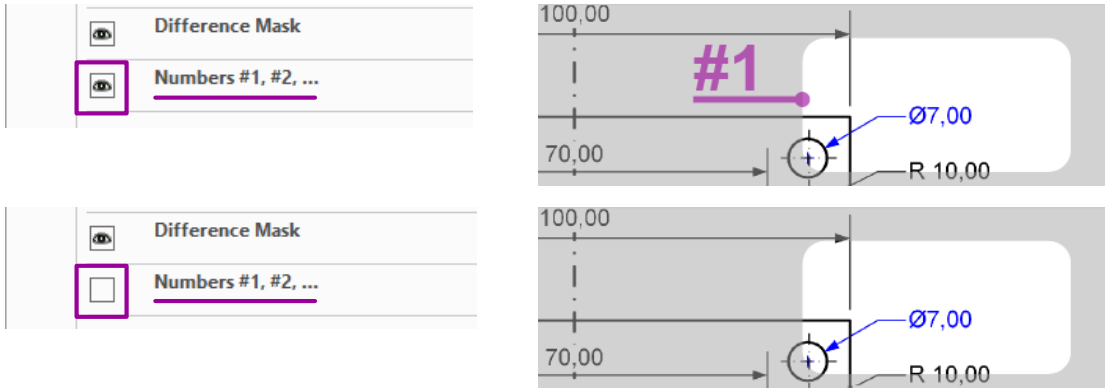

Numbering of the difference areas

The "Numbers #1, #2, ..." can be used to reference the bright difference areas.

They are shown or hidden by default (server configuration).

If required, the numbers can be shown or hidden interactively.
